31 Compilador

Compilador

É um aplicativo que traduz (compila) o código-fonte em um código que o processador pode entender e executar. Este código de máquina é armazenado na forma de um arquivo executável.

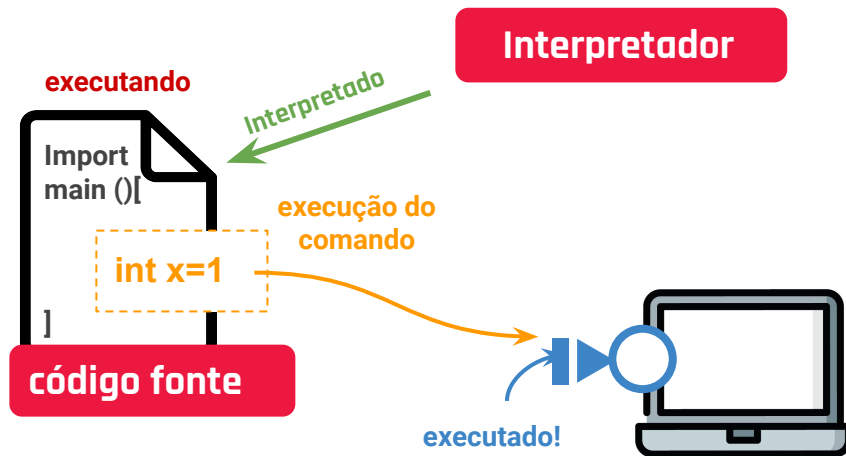

4l Interpretador

Interpretador

Ele traduz o código-fonte linha por linha e o executa diretamente.

O processo de tradução funciona muito mais rápido do que em um compilador, mas a execução é mais lenta e requer uma grande quantidade de memória.
